

Accommodation Statement

In accordance with the requirements of title II of the Americans with Disabilities Act of 1990 ("ADA"), Hillsborough County will not discriminate against qualified individuals with disabilities on the basis of disability in its services, programs, or activities. Persons with disabilities who need an accommodation for this document should email the Hillsborough County ADA Officer or call (813) 276-8401; TTY: 7-1-1.

Calendar Year 2021

Annual Consumer Confidence Report

Our Continuing Commitment to You

We pledge to continue providing high-quality drinking water to your tap daily in a manner that is environmentally sensitive, cost-conscious, and that

anticipates future community needs by taking advantage of new processes and technology.

About this Report

Hillsborough County's annual Water Quality Report provides our customers important information about the high-quality water and value-focused services we provide. Public Water

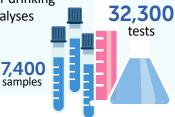

Seaboard | Public Water System 6290333

This report shows your water supply is carefully managed, and your tap water meets or exceeds all health-based standards established by the U.S. EPA and the State of Florida for safe drinking water.

In 2021, our team

collected approximately 7,400 water samples, performed 32,300 tests on our drinking water, and continues to do analyses beyond those presented in this report to monitor and optimize water quality.

Have Additional Questions About...

We encourage customers to pursue additional information about their drinking water, and we are here to answer any questions you may have.

- ♦ This Water Quality Report: call (813) 663-3251
- Water Quality: call the U.S. Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791

Participate in Decisions Concerning Your Drinking Water

Water, wastewater, and reclaimed water services are provided through the Water Resources Department and Environmental Services Division under the County Administrator's organization. We encourage public interest and participation in the decision-making processes affecting water issues. County government's legislative branch is the Board of County Commissioners (BOCC).

The BOCC conducts meetings on budgetary and other financial matters, approves contracts, and considers ordinances that create or amend local laws, including those affecting the Water Resources customer rates and fees. The BOCC generally holds its regular meeting on the first and third Wednesday of each month at 9 a.m. at the Frederick B. Karl County Center, 601 E. Kennedy Blvd. in downtown Tampa. Links to agendas can be found at HCFLGov.net/BOCC.

The meetings are televised live on Hillsborough County Television (HTV), Channel 637 on Spectrum, Channel 22 on Frontier, and through live streaming on the County's website. Comments can also be submitted through the County's website at HCFLGov.net/AtYourService.

Letter from the Director

Hillsborough County Water Resources is proud to report that, once again in 2021, the high-quality drinking water we provide to our Hillsborough County customers has met health based standards from the U.S. EPA and State of Florida.

We are proud to deliver superior drinking water with an ongoing commitment to quality and customer satisfaction.

Meeting these health and safety requirements is and has always been our top priority.

Each year, the department publishes a Consumer Confidence Report (CCR) that provides important information about the drinking water we produce and deliver to our customers. This report is a requirement of the

Safe Drinking Water Act and is for your protection. The report holds us accountable for performing routine tests for various chemicals and potential contaminants to ensure the health and welfare of our community. In this report, you'll find our 2021 water quality testing results, background on our local water resources, and information on our continued investment into local water infrastructure.

We recognize that quality drinking water is not only a basic need, but essential to continued economic growth and development in Hillsborough County. The department remains committed to continue improvements to our production and delivery systems to ensure that our customers have quality water for years to come.

This year, Water Resources has invested in the infrastructure that delivers your water. We've replaced old pipelines, increased system pumping and storage capacities, installed additional water quality monitoring capabilities, and enhanced the certified environmental laboratory that provides state of-the-art testing for every water quality analysis performed.

As Hillsborough County Water Resources looks to 2022, we continue to ask customers to partner with us by following water conservation practices to help us preserve our precious water resources.

I am proud to share this report with you, as well as some of the initiatives that help keep our drinking water world-class, and to encourage you to continue drinking healthy and affordable Hillsborough County tap water.

Sincerely,

Beth Schinella

Director, Hillsborough County Water Resources

Where Does My Water Come From?

Hillsborough County's Seaboard system is a consecutive system to City of Tampa, which means that Seaboard customers receive water that is purchased from the City of Tampa. The Hillsborough River is the City of Tampa's primary drinking water source. When the river supply cannot meet City of Tampa demand during dry periods, up to 1 billion gallons of finished water stored underground in Aquifer Storage and Recovery (ASR) augments the supply. At times, during extended or extreme dry periods, City of Tampa also buys treated regional groundwater, surface water, and desalination seawater from Tampa Bay Water (TBW).

Seaboard

Depending on the source water, water treatment could include coagulation, settling, filtration, pH adjustment, Reverse Osmosis (RO), stabilization, ozonation, chloramination, and fluoridation.

The City of Tampa and Hillsborough County have testing systems in place to ensure that water delivered to customers meets quality standards. At Seaboard no further treatment of the water purchased from the City of Tampa takes place prior to delivery to our customers.

ater is one of our most precious and limited natural resources. While most of the Earth's surface is covered in water, only a very small amount is available for use. About 99% of the Earth's water is in the oceans or frozen in the polar ice caps, leaving less than 1% of the resource as freshwater fit for human use.

99%

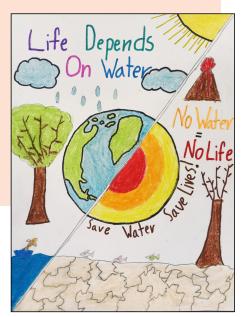

Everyone can help preserve our water supply. Water conservation should not be only for emergencies - it should be a way of life. Conserving water today saves you money on Conservation your utility bills and reduces the cost of building new water and wastewater infrastructure.

Water

Hillsborough County K-12 students shared their water conservation ideas during the annual Drop Savers Poster Contest.

There are hundreds of ways to conserve water. Some are very simple, but all of them begin with you.

Here are five ways to start conserving water and saving money today.

1. Turn your automatic irrigation controller to OFF. Conservation ordinances limit lawn watering to specific days and times year-round. However, depending on weather conditions, your yard may need less water than you think. Look up your allowed day(s) and hours at **HCFLGov.net/WaterRestrictions**.

2. Get paid to make water-wise choices. The regional Tampa Bay Water Wise program provides rebates for high-efficiency toilet retrofits, smart irrigation controllers, and other water-saving devices and measures. Learn more at TampaBayWaterWise.org.

3. Seek the leak. Finding and fixing easily corrected household water leaks can save homeowners about 10 percent on their water bills. Your water meter can be used as a simple initial leak detection tool.

4. Check your irrigation system for water waste. Most irrigation systems run at night when no one is watching. Perform a monthly visual inspection of your system in operation to look for leaks, broken sprinkler heads, and misdirected spray patterns.

5. Go low to slow the flow. Low-flow showerheads, faucet aerators, and toilets save water without sacrificing performance. Look for the EPA WaterSense label when shopping for replacements.

Customer Programs and Resources

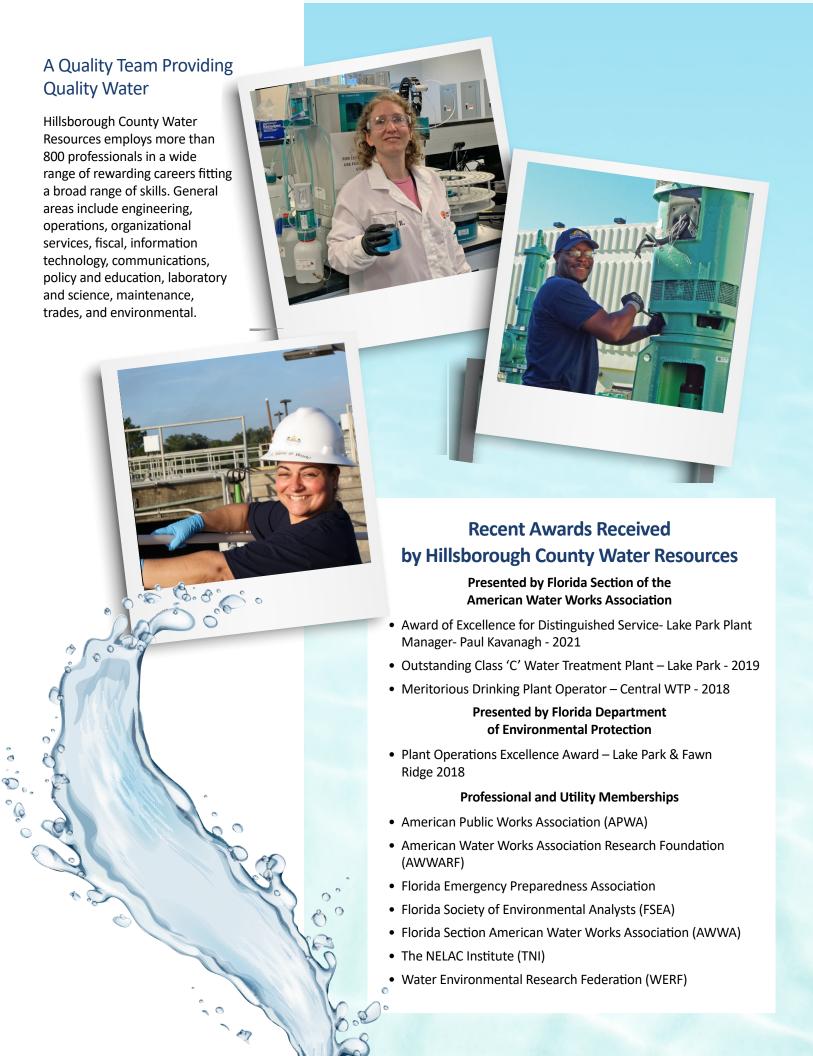

- On-site irrigation evaluations free on-site irrigation evaluation services for high-volume water users irrigating with metered water
- Personalized landscape and irrigation system guidance – the Hillsborough Master Gardener Help Desk is available to answer questions about landscapes
- Compost, micro-irrigation, and rainwater harvesting workshops – learn from the UF/ IFAS Extension Hillsborough County how to have a healthy and attractive landscape for less money
- Florida-Friendly Landscaping[™] learn how you can have a beautiful landscape that could save you time, energy, and money while protecting our water resources and environment
- Water conserving habits find dozens of free tips on our website to reduce water use and save money inside and outside

Find details on all these services and more at **HCFLGov.net/WaterConservation** or call the Water Conservation Team at (813) 663-3295.

Do Your Part to Keep Our Water Clean

- · Only follow manufacturer's instructions for lawn chemicals
- Always follow seasonal fertilizer rules
- · Avoid overwatering your lawn
- · Safely dispose of used cooking oil at a CORE drop-off for recycling
- Don't rinse or flush medications and trash down the drain
- Never pour fluids or dump debris down storm drains

Source Water Assessment

The Florida Department of Environmental Protection (FDEP) has developed a Source Water Assessment and Protection Program. The program is meant to ensure that not only is the water at your tap safe to drink, but also that the source is protected. Specific information for your water system is discussed below.

In addition, the FDEP has developed a website for the Source Water Assessment Results for the public to obtain information on individual public water systems.

fldep.dep.state.fl.us/swapp.

To obtain a copy of an assessment form from FDEP, or if you have questions about this program, call (850) 245-8658.

In 2021, the FDEP updated their Source Water Assessments information about potential sources of contamination in the vicinity of surface water intakes and wells, which supply the water provided to Hillsborough County Customers. The water sources are considered by FDEP to be at low to high risk because of the many potential sources of contamination present in the assessment area. The water sources are considered by FDEP to be at low to high risk because of the many potential

sources of contamination present in the assessment area. The potential sources of contamination, the susceptibility scores, and the levels of concern assigned by FDEP are available on the Source Water Assessment and Protection Program website at fldep.dep.state.fl.us/swapp or by contacting Florida's drinking water program at (850) 245-2118.

About Your Water Supply

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material. It can also pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as virus and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- Inorganic contaminants such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products
 of industrial processes and petroleum production, and can also come from gas stations, urban stormwater
 runoff and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Home Water Treatment Systems

Compounds may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily a cause for health concerns. For concerns with taste, odor, or color of drinking water, contact the Water Resources Water Quality Hotline at (813) 264-3835.

Installing a water softener or filtration system is a matter of personal preference. If you choose to purchase one then do your research and remember that these systems often require routine maintenance. Neglecting to perform the maintenance on these systems can degrade the quality of your water.

At no time will a County employee ask to enter your home to test your water unless a specific problem has been reported. County employees wear official uniforms and carry County identification.

Notice About Lead Levels

The EPA requires that utility systems include information in their annual water quality reports about lead levels in drinking water. If present, elevated levels of lead can cause serious health problems, especially for pregnant woman and young children.

Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Hillsborough County Water Resources is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two

minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested.

Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at www.epa.gov/safewater/lead.

Hillsborough County routinely monitors the quality of its drinking water. A water softener or filtration system might change the taste or "feel" of the water, but the water is perfectly safe to drink without these additional treatments.

Immuno-Compromised Customers

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. Environmental Protection Agency/Center for Disease Control guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Water Quality Table

Understanding the Table

Hillsborough County routinely monitors drinking water quality parameters according to federal and state laws. The table in this report includes those analytes that were detected in our routine compliance monitoring for the period of January 1 through December 31, 2021, or the most recent testing as otherwise indicated in the table. FDEP regulations allow monitoring for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. As a result, some of the data, though representative, is more than one year old.

Terms & Definitions

In the table, you may find unfamiliar terms and abbreviations. To help you better understand these terms, we've provided the following definitions:

Action Level (AL) - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant Level (MCL) - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

N/A - Not Applicable

ND - Not Detected and indicates that the substance was not found by laboratory analysis.

Nephelometric Turbidity Unit (NTU) - Measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person. High turbidity can hinder the effectiveness of disinfectants.

Parts Per Million (ppm) or Milligrams Per Liter (mg/l) - One part by weight of analyte to 1 million parts by weight of the water sample.

Parts Per Billion (ppb) or Micrograms Per Liter ($\mu g/I$) - One part by weight of analyte to 1 billion parts by weight of the water sample.

Picocuries Per Liter (pCi/L) - Measure of the radioactivity in water.

Treatment Technique (TT) - A required process intended to reduce the level of a contaminant in drinking water.

SEABOARD PWS 6290333

This report includes most recent data collected for the system

Stage 1 Disinfectant and Disinfection By-Products

| Disinfectant or Contaminant and Unit of Measurement | Dates of Sampling | MCL or MRDL Violation | Level Detected | Range of Results | MCLG or MRDLG | MCL | Likely Source of Contamination |
|---|--------------------------------------|-----------------------------|-------------------|---------------------|------------------|-----------|---|
| Chloramines (ppm) | January 2021- December 2021 | No | 2.9 | 0.4-3.7 | MRDLG= 4 | MRDL= 4.0 | Water additive used to control microbes |

Stage 2 Disinfectants and Disinfection By-Products

| Contaminant and Unit of Measurement | Dates of Sampling | MCL Violation | Level Detected | Range of Results | MCLG | MCL | Likely Source of Contamination |
|--|--------------------------------------|------------------|-------------------|---------------------|------|----------|---|
| Haloacetic Acids (five) (HAA5)(ppb) | January 2021- December 2021 | No | 13.7 | 8.5-19.5 | N/A | MCL = 60 | By-product of drinking water disinfection |
| TTHM (Total Trihalomethanes) (ppb) | January 2021- December 2021 | No | 23.8 | 14.4-28.5 | N/A | MCL = 80 | By-product of drinking water disinfection |

Lead and Copper (Tap Water)

| Contaminant and Unit of Measurement | Dates of Sampling | Action Level Exceeded | 90th Percentile Result | Number of sampling sites exceeding the Action Level | MCLG | Action Level | Likely Source of Contamination |
|--|------------------------------|-----------------------------|------------------------------|---|------|-----------------|--|
| Copper (Tap Water) (ppm) | January- December 2020 | No | 0.200 | 0 | 1.3 | 1.3 | Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives |
| Lead (Tap Water) (ppb) | January- December 2020 | No | 0.83 | 0 | 0 | 15 | Corrosion of household plumbing systems; erosion of natural deposits |

The following were tested by the City of Tampa

Turbidity

| Contaminant and Unit of Measurement | Dates of Sampling (mo./yr.) | MCL Violation Y/N | The Highest Single Measurement | The Lowest Monthly Percentage of Samples Meeting Regulatory Limits | MCLG | MCL | Likely Source of Contamination |
|--|-----------------------------------|-------------------------|--------------------------------------|--|------|-----|-----------------------------------|
| Turbidity (NTU) | JanDec. 2021 | N | 0.29 | 100% | N/A | TT | Soil runoff |

The result in the lowest monthly percentage column is the lowest monthly percentage of samples reported in the Monthly Operating Report meeting the required turbidity limits.

Inorganic Contaminants

| Contaminant and Unit of Measurement | Dates of Sampling (mo./yr.) | MCL Violation Y/N | Level Detected | Range of Results | MCLG | MCL | Likely Source of Contamination |
|--|-----------------------------|-------------------------|-------------------|---------------------|------|-----|--|
| Barium (ppm) | May-21 | N | 0.013 | 0.013 | 2 | 2 | Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits |
| Fluoride (ppm) | May-21 | N | 0.63 | 0.63 | 4 | 4.0 | Erosion of natural deposits; discharge from fertilizer and aluminum factories. Water additive which promotes strong teeth when at the optimum level of 0.7 ppm |
| Nitrate (as Nitrogen) (ppm) | May-21 | N | 0.28 | 0.28 | 10 | 10 | Runoff from fertilizer use; leaching from septic tanks sewage; erosion of natural deposits |
| Sodium (ppm) | May-21 | N | 69 | 69 | N/A | 160 | Salt water intrusion; leaching from soil |

Stage 1 Disinfectant and Disinfection By-Products

| Disinfectant or Contaminant and Unit of Measurement | Dates of Sampling (mo./yr.) | MCL or MRDL Violation Y/N | | Range of Results | MCLG or MRDLG | MCL or MRDL | Likely Source of Contamination |
|---|-----------------------------------|------------------------------------|------|---------------------|------------------|----------------|---|
| Bromate (ppb) | Monthly 2021 | N | 3.15 | ND-4.95 | MRDLG= 0 | MRDL= 10 | By-product of drinking water disinfection |

Organic Compounds

| | | | • | • | | | |
|-------------------------------------|-----------------------------------|-------------------------|-------------------|---------------------|------|-----|--------------------------------------|
| Contaminant and Unit of Measurement | Dates of Sampling (mo./yr.) | MCL Violation Y/N | Level Detected | Range of Results | MCLG | MCL | Likely Source of Contamination |
| Total organic carbon (ppm) | Weekly 2021 | N | 2.34 | 1.82 - 4.67 | N/A | TT | Naturally present in the environment |
